ABOUT ME

Dedicated and innovative Computer Science student with skills in AI, computer networks, 3D modeling, and virtual reality. Developed 'Virtual Mart,' a 3D VR-based shopping application delivering immersive and interactive shopping experiences. Eager to pursue a Master's in Computer Science to deepen expertise in AI and computer networks and create innovative solutions that address global challenges.

WORK EXPERIENCE

Atom Global Information

Intern At Atom Global Information

07/2025 – 06/09/2025

During my internship at Atom Global Information, a premier IT and consulting firm specializing in technology-driven solutions, I contributed to innovative projects leveraging Unity 3D, Figma, IoT devices, VR systems, and emerging digital twin technology.

I developed and integrated solutions involving Unity 3D with IoT sensors and VR devices, establishing seamless linkages between these technologies to enhance real-time interactivity and data-driven insights.

My work supported Atom Global's mission to empower businesses in real estate, retail, and custom software development, including e-commerce, AI, and IoT systems.

This experience deepened my expertise in Unity 3D development, IoT integration, VR design, and digital twin implementation, equipping me with practical skills in cutting-edge technologies to address complex business challenges.

Director (Technical) PAC Board Kamra

Address Pakistan Aeronautical Complex, Pakistan Air Force, Kamra Attock, Pakistan

Intern at Pakistan Aeronautical Complex Kamra

06/2024 – 07/2024

During my internship at Pakistan Aeronautical Complex Kamra under the Director (Technical), I focused on the theoretical aspects of Line Replaceable Units (LRUs) and aircraft systems. Drawing on my computer science education, I engaged with topics like avionics and radar technology, improving my problem-solving skills and enhancing my ability to manage complex systems.

RESEARCH EXPERIENCE

2025 – CURRENT

Final Year Project: VIRTUAL MART – A 3D BASED NON-IMMERSIVE VR SHOPPING STORE

- Designed and developed a 3D VR shopping application using Blender for 3D modeling and Unity for VR environment design, simulating a real-world store experience to enhance e-commerce engagement.
- Conducted in-depth research on VR applications in e-commerce, identifying key user needs and technical requirements to inform project development.
- Overcame performance and interaction challenges by optimizing the VR environment through iterative testing and refinement of 3D models and scripts.
- Delivered a functional prototype demonstrating VR's transformative potential in online shopping, receiving positive feedback from peers and faculty.

EDUCATION AND TRAINING

14/09/2022 – CURRENT Kamra, Pakistan

Bachelor of Science in Computer Science (BSCS) Air University Aerospace and Aviation Campus, Kamra

Website <https://aack.au.edu.pk/> | Final grade 3.1 CGPA (6 semester)

2020 – 2022 Kamra, Pakistan

Intermediate in Computer Science (ICS) Government College ARF kamra

Final grade 84.5% 930/1100

2018 – 2020 Kamra, Pakistan

Matriculation Government College ARF kamra

Final grade 84.5% 930/1100

PROJECTS

2025 – CURRENT

Final Year Project: VIRTUAL MART – A 3D BASED NON-IMMERSIVE VR SHOPPING STORE

as described in Research Experience

AI-Insurance-Claim-Predictor

The project develops a machine learning model to predict insurance claim risks using the Porto Seguro dataset, deployed as a Flask web application.

Smart Agriculture System Using Cisco Packet Tracer

Smart Agriculture System is a Cisco Packet Tracer-based project that designs a hierarchical IoT-enabled network for real-time soil monitoring and automated irrigation. It uses sensors, actuators, secure wireless communication, and automation scripts to optimize resources, supports remote management, and lays groundwork for AI-driven analytics.

Barcode Detection and Decoding

Project creates a system to automatically detect and decode barcodes from digital images, tackling issues like varying orientations and lighting conditions. It uses image preprocessing, contour detection, and the pyzbar library for accuracy, featuring a user-friendly Tkinter GUI with visual feedback via bounding boxes.

LUDO Game Development Report using Multithreading

Developed a multithreaded Ludo game to manage concurrent player actions, showcasing skills in concurrent programming and game development. Optimized performance to ensure a seamless multi-player experience

Fitness Dashboard using Windows Forms in Visual Studio 2019

Developed a Fitness Dashboard application using Windows Forms in Visual Studio 2019, enabling users to track workouts, monitor progress, and visualize fitness data. Showcased strong skills in C# programming and user interface design.

LANGUAGE SKILLS

MOTHER TONGUE(S): Urdu

OTHER LANGUAGE(S): English (Proficient – All academic coursework completed in English)
